NOTICE to Members, Care Givers and Health Care Professionals:

The Medic Alert Registry allows the Cooperative to consider a member's life-threatening health condition dependent on the operation of electrical equipment whenever possible. The Cooperative can provide advance notice of planned disruption for maintenance purposes, provide information to help members make decisions regarding their health and comfort, and help members and their care givers evaluate the need to evacuate to a shelter or other accommodations in the event of an extended power disruption.

Placement on the Registry does not guarantee uninterrupted service, prevent electric service disruption, or relieve a member's responsibility to maintain an account in good standing. Nor does the registry guarantee that members with severe medical conditions will be able to have their electric service restored following a natural or man-made power disruption without consideration for the greater good and safety of the general public.
